

3DESIGN Expert Seminar

Brussieu, France
October 2005

From October 11th until the 14th, Vision numeric welcomed various participants to its **3DESIGN Expert Seminar**. During this week, our certified and experienced **3DESIGN** trainers provided a 4-day expert session to all invited **3DESIGN** users present in Brussieu, France.

Planned and organized for a few months, this session was the occasion for expert users to apply **3DESIGN's** capabilities to **specific and complex jewellery cases**.

Launched June 2005, **3DESIGN V4** encompasses many new and powerful features. During the seminar, our team took some time to explore and practice these new functions and in greater details.

Participants greatly appreciated the **exchange between professionals** and trainers. Expert group training sessions truly enhance the practise of **3DESIGN**.

David Lehmann, official **3DESIGN** expert trainer, says *"The level of this group is really good. Learning from other users gives such an added value to an expert session and we have such a good time exchanging tricks and tips."*
