

From February 14th-17th, **Eurexpo**, Lyon's primary exhibition hall, welcomed the **Eurobois** trade exhibition. **Eurobois** is the professional trade show dedicated to furniture, its arrangement and components. Located in **Lyon**, our home city, our team was motivated and at ease to welcome and inform visitors about the potential of our solutions.

For **Vision numeric**, tradeshows are the perfect opportunities to *meet with our partners*. Machine manufacturers know how important it is to provide a software solution as powerful as their machines are, and they know where to orient their customers to find one.

The *need for design and artistic* keeps on growing for all wood applications. Carpenters, cabinet and furniture makers, interior architects, custom-made specialists agree to say *differentiation is now a key advantage* in their field. The artistic and 3D designs make a difference in front of their customers.

For those professionals not yet equipped with machine and/or software, our **Type3 solutions'** main functionalities fulfil their first needs for scan and vectorization of logos and images, 2D features, etc. This is their *first step towards an artistic world*. Small sized carpenters, sculptors and engravers see the need to invest in NC machines and software to make their production profitable. It is a necessary step they have to take in order to *grow their business*. For those already equipped, our most advanced 2.5D or 3D features help them go further into *detailed and precious designs*.

Our team present during the show explains they have met a lot of contacts and made many demonstrations of our solutions. Our solutions fulfil the needs for 3D artistic applications because we understand the needs and constraints these professionals have. *Type3 solutions are speeding-up the innovation process for all wood-related professionals and applications*.

If you missed us at **Eurobois** and want more information, please contact Cécilia Martinière at c.martiniere@type3.com
