

Vicenza Oro, January, 2006 Exclusive: A new global offer for jewelers

Although overall traffic seemed to have slowed down at the Vicenza Oro Fair, we must admit it definitely isn't so on the Type3 booth. The 2004 and 2005 editions of the show have not held up to all their promises for most exhibitors, so 2006 appeared somewhat of a challenge for many.

Visitors on the show came from various horizons: mostly from European countries (with a majority of Italians of course) but also from Asian countries and we met an increasing number of South Americans.

Vicenza Oro 2006 also coincided with the launch of a new offer proposed by Vision numeric Italy. Premiering on Vicenza Oro 2006, this brand new offer is indeed a complete solution for professional jewelers. It includes 3DESIGN, the 3D CAD solution for jewelry creation, InVision HR, the 3D printer, and a wide array of services and maintenance contracts along with the products. This global solution allows jewelers to control the entire chain: from 2D sketch all the way to quality prototypes.

Demos of the machine producing prototypes were a huge success on the show and attracted many visitors. The 3D printer produced no less than 40 different pieces in about 4-5 hours time. The prototypes meet the highest quality and speed standards.

Targeted as a complete, high-end solution, this global offer answers the needs and wants of all professional jewelers. Success encountered on the show, both for 3DESIGN and InVision HR, confirms our wish to satisfy our clients by providing quality products, services and support.

To find out more about this special Italian offer, please contact Vision numeric Italy directly:
