SIGN EXPO 2008 OSAKA, Japan, June 18 – June 20 2008 TypeEdit impresses upon Japanese Sign Makers.

From June 18th to 20th, the annual **Sign Expo** trade fair, dedicated to the sign business in Japan, took place in Osaka. This exhibition was not very large - 88 exhibitors for an average of 22,100 visitors - but very professional, focused on:

- Various types of ready-made signs/standard signage,
- Adhesive sheets for signage, other new materials for signage,
- Electrical tools, LED message board, designing & drawing tools,
- **CAD system/digital copier/printer, machine tools,**
- **CAM system, machinery & tools, environment-related facilities, etc...**

MISOL, our local partner and CAD/CAM solutions provider, participated in this trade show, introducing TypeEdit in association with the Korean SIN WOO NC Tech CNC Router machine.

The purpose of this exhibition for MISOL was mainly to show the powerful functionalities of TypeEdit coupled with the strong capability of the Korean CNC router to Japanese prospects in sign market. All the sample files used during the exhibition were designed and output for CNC machine by TypeEdit.

The CNC machine was so accurate that it could engrave perfectly 0.5mm sized Japanese character on Acrylic and PE samples by speed 5000~10,000 mm/min. All visitors were very pleased as soon as they recognized the precise shape of engraved characters through magnifying glasses.

The visitors have shown great interest in 3D samples designed by TypeEdit, combined with the very fast speed of cutting 3D shapes from the CNC machine.

TypeEdit brings complete and accurate solutions for designing, engraving, cutting and machining in 2D-3D.
