

Tokyo, Japan: Japan Jewelry Fair Success at all levels for the Japanese jewelry industry

From August 31st until September 2nd, our **3DESIGN** reseller: *Maruichi Solutions* participated to the Tokyo Big Sight Exhibition in Japan. During this three-day exhibit, our reseller exhibited our solutions on his partner's booth: *Suzuho*. *Suzuho* is a machine reseller, during the show, they demonstrated for brands such as Envision Tech and other CNC machines as well as jewelry tools.

Japan is a country extremely interested in **3DESIGN** and its powerful capabilities. The "Japan Jewelry Academy" has already installed education licenses in its classes and positively advertised for their curriculum with **3DESIGN** during the three days. Potential students were so convinced some of them have already signed up for the class right on the booth.

Our reseller was truly enthusiastic about **3DESIGN** and the response it got from students and other professionals visiting the exhibit. **3DESIGN** received great critics throughout the show and was probably the most sought after solution there. Questions about the product and new conceptual technologies were various and frequent.

The staff from *Maruichi Solutions* has a very positive outlook about the exhibit and evidence of the success encountered by **3DESIGN** are the various orders our reseller received during the exhibition. Our reseller also believes the exhibition was the perfect opportunity and timing to present **3DESIGN** to the educational market, especially having installed licenses at the Japan Jewelry Academy. Other universities and high schools have shown great interest in **3DESIGN** and are already talking about installing full packages for their students in their establishments.

Vision numeric wanted to thank *Suzuho* for allowing our reseller to exhibit with them and congratulate *Maruichi Solutions* for such a great job during the exhibition. Keep up the good work!
