

LaserType: the versatile and professional laser software solution

Lyon, France - September 30th 2004 - Vision numeric announces the release of the LaserType V3, the professional laser-dedicated software which optimizes your laser machine's performance. It combines in a single solution all the required functions for your laser marking, cutting and deep engraving needs.

You can discover Type3 products family on www.type3.com.

Today, the laser is a state-of-the-art tool used to machine the tiniest details. For logo engraving, surface decorations and bas relief sculptures. The industry needed artistic and technical software to handle these kinds of job. Vision numeric has taken advantage of its extensive 15 years experience in Laser and CAD/CAM to develop LaserType.

This professional Laser solution works with any Laser machine, enhancing its capabilities and increasing its productivity and return on investment.

LaserType V3 opens new opportunities and reaches the "emotional field" of the market. Indeed one of its main innovations is the Photo module. Developed because of a growing trend, this Photo Pilot is a new profession in itself and will revolutionize the photo industry.

A powerful wizard helps you to perfect photographs in no time. No other software is needed! Design your own frames, import them from a library or simulate one from your own shop, personalize with text and special effects. Automatic simulation and cost estimation helps increase your revenues and sets you apart from the competition.

Many other functions characterize this LaserType V3 such as the stamp wizard, unlimited possibilities of text editing, the advanced true shape nesting, Matrix... and of course the 3D texturing and artistic modelling.

It also has a new dongle system that will allow companies to use the solution through a multi-license network.

LaserType is the professional laser-dedicated software. In a single solution it offers all the necessary functions for laser applications. Whether your need is graphic or technical, it is upgradeable from 2D to 2.5D or to 3D. Laser users no longer need to buy different software for each machine. LaserType is all that is required to serve as your professional Laser Platform.
