Vision numeric USA at JCK 2005

It's your business to be here

The JCK Show held its doors opened from June 3rd-7th, 2005. This 2005 edition definitely announced the rise of 3DESIGN as the leading CAD software solution.

Tens of thousands of retailers attended this edition and was evidence that The JCK Show –Las Vegas met the demands and exceeded the needs of the participants.

With tens of thousands of visitors, JCK Las Vegas is the number one jewelry show in the USA. Participants and visitors mainly came from the United States, Central and South America and Asia. Vision numeric USA held a booth during the show and encountered a huge success. Both TypeEdit and 3DESIGN were presented during the event as leading CAD and CAM solutions for jewelry.

Our team met many designers who were eager to discover and learn about new solutions for their industry in terms of software and machines. Software is becoming more and more accessible and Type3 solutions can only prove this trend to be true. With such strong interest, visitors kept asking for more demos and explanations. People who came once for a demo came back for more or brought along business partners to share their feelings and experience with TypeEdit and 3DESIGN.

The parametric aspect of 3DESIGN, the component library and draft kit functions were all much awaited for features. These and others helped convince future users of the accessibility and necessity of using such powerful tools as TypeEdit and 3DESIGN for their everyday jobs.

JCK 2005 was the show where 3DESIGN was truly revealed to the audience. Such enthusiasm and interest encourage our team to do even more to anticipate users' needs and wants. The show was also the occasion to welcome new reseller for North America: Ernie Espinel (to contact him: ernie@cadforjewelry.com).
