

For these guests who do not own this kind of equipment yet, the seminar allowed them to see immediate benefits these investments can bring as well as the many ways proposed to increase productivity as soon as possible.

CRIJPEJ SA DE CV

Since its beginning, the CRIJPEJ does its best to promote and develop new technologies to all its members.

3DESIGN definitely is an innovative and very interesting product for them. This seminar allowed them to confirm that 3DESIGN is the ideal software solution for jewelry creation.

Here a few of the most common comments we heard about 3DESIGN: very useful for the industry, complete, modern, answers the needs and wants of professionals in the jewelry field and easy to use.

If you had one word to qualify 3DESIGN, what would it be:

- excellent (Monica Ortiz, Director at the CEDIJ)
 - excellent (Jessica Rodriguez, training coordinator)
 - efficient (Carmen Lucia Sandoval, advisor CRIJPEJ)
-

JOFINSA SA DE CV, jewelry producer since 35 years, shares his experience.

The company first discovered the advantages of TypeEdit during a demonstration of basic 3D drawing. They realize that TypeEdit could offer unlimited 3D drawing possibilities. Thanks to this demo, they now know that their existing CAD/CAM equipment doesn't meet all their drawing needs and even less so concerning 2D and 3D machining.

Mr. Juventino Hernandez (head director):
'Type 3 is what I have never seen before in a CAD/CAM software: it has it all'.

Jofinsa is a leader in its field, recognized for using the latest technologies for its production center in jewelry. After a simple demonstration, they see that no other CAD/CAM software can give the results that were reached with TypeEdit.

If you had one word to qualify TypeEdit, what would it be:

- great (Juventino Hernandez, head director)
 - excellent (Juventino Hernandez Jr, Design)
 - very good (David Cabañas, Chief of production)
-

JOYERIA SUIZA SA DE CV, high jewelry producer shares his experience.

Mr. Carlos Villalba, director of Joyeria Suiza, located in San Luis Potosi in Mexico, wants the utmost technology for his production system. For this exact reason and for years he has been looking for new methods to increase his productivity.

Since he participated to our products presentation seminar, he has continued to evaluate available programs but still believes, as the first day of the seminar, that no other program than the Type3 solutions is more adapted to its jewelry production center.

Mr. Villalba believes Type3 solutions are '100 % safe and highly productive'.
