JCK Las Vegas: Success at all corners

This year, Vision numeric had no less than three different booths to present its powerful **3DESIGN** solution. *Vision numeric*, *Stuller* and *Progress* all presented **3DESIGN** and met with numerous professionals from the jewelry environment. A majority of them are retailers aware of new technologies offered to them such as CAD/CAM.

The industry is currently moving towards these new tools and methods and **3DESIGN** is the way to go. These professionals know they must invest in tools that can and will make them successful today as well as tomorrow and they are ready for this transition. **3DESIGN** was much sought after during the show. With these three booths, they had a maximum of chances to discover our solution.

Jewelers, retailers, designers, decision makers, all are astounded by **3DESIGN**. "Easy", "Fun", "Attractive", "Fast" were key terms that kept coming up about the software solution. Demos were made one after the other, visitors showed the most interest for our *unique parametric technology* which allows you to edit your creation at any step. They were also curious about *jewelry specific wizards* and functions, *create from a sketch*, and much more.

This show's edition marked a turn in the vision professionals from the jewelry industry have about new technologies. **3DESIGN** is on its way to become this *new reference* in jewelry CAD creation. Be sure to see us there again next year!
