

BASELWORLD 2006 > the sector is booming!

Vision numeric was exhibiting like every year at **Baselworld** in Basel, Switzerland. Our team took once again this opportunity to present some of Type3's software solutions:

- **TypeEdit Jewel** for 2D, 2.5D and 3D manufacturing
- **3DESIGN**, the 3D jewellery dedicated software.

Once again **3DESIGN** met a great success among visitors. A large majority came from France, Belgium and Switzerland but we also had many visitors from Asian countries such as Thailand and India.

An interesting part of the Baselworld experience is meeting with decision-makers. Most contacts made are with directors, designers, professionals who will take a step forward and invest in new technologies. All are aware of CAD technology and realize the benefits such innovations can bring to their company and productivity levels. Whether they work in jewelry, goldsmith, watch-making, etc. they could all find a solution to *answer their specific needs from easy and parametric creation to realistic rendering pictures*; all professionals represented at the Baselworld had their expectations satisfied.

Baselworld is also the opportunity to meet with our partners (Posalux and Buko), our resellers (from Liban, Russia, Germany, Hong Kong, Turkey, etc) we do not get the chance to see much the rest of the year. Keeping in touch, exchanging information and brainstorming around potential new developments and products is also always appreciated. Our team would like to thank our booth's neighbor partners Posalux and Buko who helped us enjoy being on this trade show and leave with a great souvenir; and all the people we met who appreciated our product and help us improve them thanks to their terrific know-how and smart ideas.

For those who missed it, no need to worry you can collect more information with:
