

When cooperation between VAR and software partner result in fully satisfied customers!

Createch is a French company based in Besançon (near the Switzerland border), specialized in the conception, development and production of parts for the watch, jewellery and microtechnics industries. **Createch** works for the most luxurious names of Place Vendôme (Paris).

Createch has been using **CATIA** software for many years with a 6 axes Bumotec machining center. When looking at a professional solution for engraving, Createch asked Keonys (new CATIA VAR for France & Belgium, replacing Dassault Systemes France) to find a solution for these special needs. Keonys contacted Vision numeric, DS software partner for 6 years, specialized in artistic CAD CAM.

On-site demonstrations allowed **Createch** users to confirm that **Vision numeric** add-in, **Type3 CAAV5 Based**, was the answer they needed. It provides design engineers with access to a specific range of tools to enrich their parts with logos, designs, texts, serial numbers.... directly in **CATIA**. Furthermore, **Type3 CAAV5 Based** ensures the respect of the graphic chart from the creation to the workshop. As a result of integrating lettering and graphics early in the conception process, users benefit from **immediate productivity gains**. Text and logos can be projected and mapped directly into **CATIA**, which can then be machined on their 6 axis Bumotec.

Immediately convinced, **Createch** placed an order and their team was trained within days.

Type3 CAAV5 Based is the **professional and powerful tool** for the integration of text, fonts, numbers, Symbols, logos... **Flexible and accurate**, it allows you to customize industrial parts or designs. Its **improved text projection and graphic design mapping** onto simple or complex 3D shapes, combined with a **full integration within CATIA V5** environment (native, integrative, associative and parametric), allows users to meet the ever-increasing requirements in part identification and customization, in the industrial marking and engraving fields.

Compatible with **CATIA V5 32 & 64 bits**, available in English, French, German... it really extends **CATIA** capabilities in terms of product customisation.
