

Success story

## Goldschmidtmeister Norbert Schmidt

Germany - 06/2010

Located in Bochum, Germany, GNS invites you on a trip into the world of precious metals, precious stones and craftsmanship. Master Goldsmith since 1983, Norbert Schmidt had, for many years, a very special model of ring in mind. However, he did not manage to materialize his idea into a concrete model until he acquired the software 3DESIGN CAD.

M. Schmidt has a leap ahead in his trade and understands the power and potential of new CAD technologies. Therefore he decided to hire someone who would be dedicated to using 3DESIGN CAD. He hired a goldsmith apprentice Ms Katharina Schiwon. In parallel of her goldsmith instruction, she and M. Schmidt followed a 3-day training session in September 2009 to get their hands on it. Even if Ms. Schiwon was very impressed by 3DESIGN, its possibilities and ease-of-use, she rapidly feels comfortable and had her first models produced after some days.

Thanks to good results Ms Schiwon rapidly had with 3DESIGN CAD, M.Schmidt asked her to work on "the ring of his dreams". In less than an hour, M. Schmidt sees his dream ring become a real 3D gold object on his computer screen: his dream comes true with 3DESIGN!

Norbert Schmidt sets a high value on doing handwork. 3DESIGN CAD is used as the perfect complement to handcraft. 3DESIGN is used daily to design many custom demands. Customers then have the opportunity to validate their pieces or make small modifications before GNS starts producing the models.

Katharina Schiwon mostly appreciates the easiness 3DESIGN CAD allows thanks to its associative technology. She tells us she also likes to play around with the rendering module, tries different possibilities but always gets a nice result to show in the end. She appreciates 3DESIGN because it is nice and enjoyable to work with and she uses it every day.

We wish Norbert Schmidt and Katharina Schiwon much success for their projects and thank them once again for their time.
